

CYBERSECURITY

ETHICAL HACKING

PENETRATION TESTING

TRAINING

Bug Bounty Program

Turn the research community into continuous security coverage for your code

OBJECTIVE

Put more eyes on the code through a **governed programme**

Ethical researchers report vulnerabilities under defined goals, rules and rewards.

ISGroup designs the process, manages reports and protects the relationship with the community.

METHOD

Clear rules, skilled triage and **tracked remediation**

Design

We define scope, policy, safe harbour, severity, rewards and channels.

Triage

We validate reports and remove duplicates and false positives.

Management

We coordinate researchers and internal teams through closure.

DELIVERY

A private or public programme aligned with business maturity

Launch can begin with selected researchers and gradually expand the community.

Platform, rewards and SLAs are calibrated to risk and internal capabilities.

Metrics and regular reviews improve coverage, response and quality.

KEY STRENGTHS

One control point connecting community, security and development

Governance Triage

Policy, ownership, escalation and budget defined before launch.

Experienced analysts verify impact and reproducibility.

Trust

Transparent communication and reliable timelines retain the best researchers.

OUTPUT

Continuous visibility over vulnerabilities, timelines and residual risk

Dashboard with report status and priorities.

Technical reports ready for development and infrastructure.

Operational metrics for triage, remediation and coverage.

Regular reviews to evolve scope, policy and budget.

Let's **HACK** together
